

# Shadow Magic

Light Blaster and Glow Screen

## Shadow Magic Template Guide:

1. With adult supervision, use scissors to cut along the dotted lines of each template.
2. When your template of choice is cut out, hold it up against the screen, or have someone else hold it for you.
3. Take your Shadow Blaster and move the power switch to the on position (see "Using Shadow Magic" instruction page for more details.)
4. Hold it in front of the template and push the activator button. The light will flash and when you remove the template there will be a shadow of it on the screen (or you can just trace the picture with the light beam instead.)
5. Before the shadow disappears, push the Light Beam Button (as shown in "Using Shadow Magic" instruction page) and add interesting designs to the shadow.
