

**4-IN-1 EXPLORER
NAVIGATION
TOOL**

ACTIVITY GUIDE
WITH INSTRUCTIONS

My Fellow Explorer,

Your new 4-in-1 Explorer Navigation Tool will prove to be essential as you embark on many fun and exciting adventures. The compass allows you to determine your precise direction, and the thermometer helps you monitor outside temperature, both vital things to know when you're exploring.

Combine these tools with the signal mirror and whistle to communicate with others, and you have the perfect all-in-one tool to start you on your way!

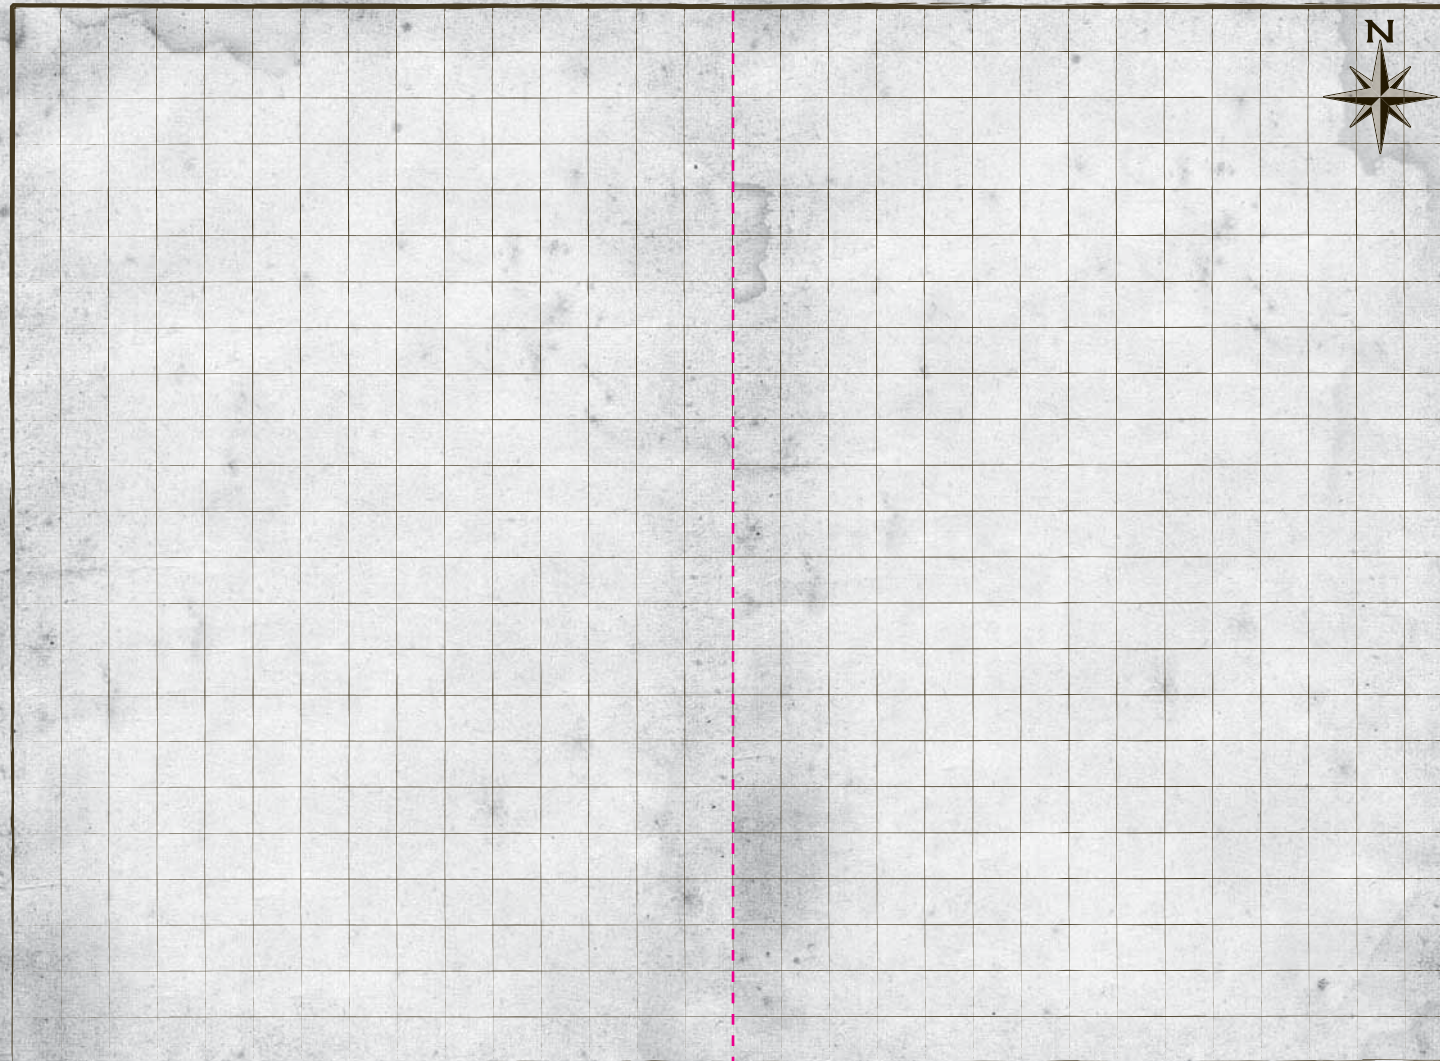

Start exploring with the activities described below, or use your imagination to think of your very own games and adventures!

DEGREES OF ACCURACY

Using the thermometer, read and record the temperature outside at the same times in the morning and evening for two consecutive days. Observe any changes in the weather, then try to predict the morning and evening temperatures for the next two days. See how accurate your forecast can be!

CHART YOUR WORLD

Make a list of places that are important to you or fun to visit, like your school, your friends' houses, and your favorite playground. Make your house "home base," and check which direction your compass points when you're there. Next time you visit each place on your list, check and mark down which direction the compass points at each of these locations too. With this information, draw a map on the grid on the following pages. Keep adding new and interesting places to your map!

National Geographic's net proceeds support vital exploration, conservation, research, and education programs.
